

## Replacement Generator and Speedo Fix TR3 by John Neal

I replaced the 15 year old generator on my TR3. Last time it was rebuilt, this time I went with new. TRF threw in a mask with my order (usually \$10) and got everything to me in 72hrs. Oh, and because COVID wasn't interesting enough on its own, I decided to move and FINALLY have something bigger than a 10x18 one car garage. I'm no longer in Barrhaven, but moved south to the warmer climate of Manotick.

A few chrome bits got replaced as well and I finally sorted the speedo issue. I had been through 3 cables (and 2 of the L shaped adapters) since 2016. Despite having the OD trans, the longer 'correct' cable was binding and snapping at the transmission. A new 'regular' short cable has solved my woes.
